

S-Line Sanitary safety

The fight against bacteria and the struggle to avoid cross-contamination are always topical issues when it comes to public health protection.

Euro-Locks is pleased to introduce **S-Line**, a new range of **antibacterial overmoulded keys**. The unique overmoulding process has been tested and is proven to **remove 99.9%* bacteria** such as e-coli and staphylococcus aureus. The S-Line range fights bacteria and avoids cross contamination between multiple users of a same key.

* Tested in laboratory SANITIZED AG – Lyssachstrasse 9, 3401 Burgdorf, Switzerland

Sanitary safety

The bacterial agent is directly introduced during the overmoulding process. This means that if bacteria comes into contact with the S-line product, the bacterial agent will successfully remove 99,9 %.

24 Hours

Without bacterial agent

With bacterial agent

Tests of the S-Line products were successfully performed under real conditions by an external laboratory *.

Example applications

With its hygienic properties, the 'S-line' range will be favoured in all environments where safety and health are paramount. This solution will be particularly useful in hospitals and medical centres, schools, catering, hospitality and other public establishments.
